Vericon Partnership

Remote monitoring solutions for
affordable, reliable compliance
and safety

Working together

We recognise the growing needs of our Social Housing customers to be able to monitor the condition of their housing stock, including the heating system and tenants welfare.

We also understand that whilst the boiler is a vitally important part of the home, there is also a need for a range of other monitoring solutions from environmental monitoring to emergency light compliance testing.

This is why we are partnering with Vericon, a specialist provider, to offer a range of solutions that can be monitored from a single portal. This includes Vericon's boiler control module (BCM) that can communicate with Worcester Bosch boilers as well as a wide range of boiler manufacturers' appliances.

BCM will give real time fault notifications, fault history and boiler data allowing faults to be managed remotely without the cost of an engineer attending site. BCM also acts as a gateway for other Vericon devices which can highlight potential issues or prevent future faults completely.

Boiler control module (BCM)

- Easy to install.
- Fault find and manage boilers remotely.
- Designed for social housing and those directly responsible for their customers welfare.

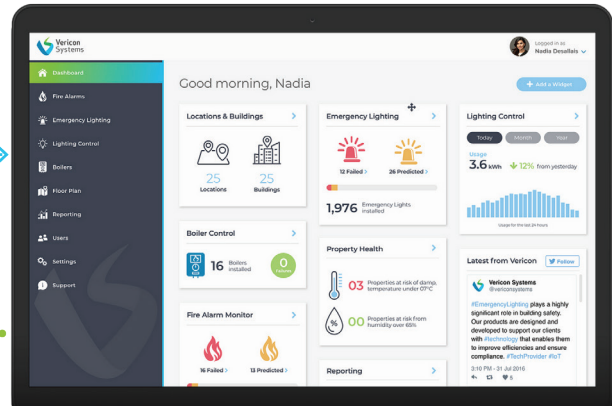

Real time monitoring

- GSM connected
- Real-time manufacturer fault code alerts
- Heating temperature settings
- System low pressure warnings
- Boiler Plus compliance
- Accurate asset list
- Fault history
- Hours used for replacement programs
- Full audit capability
- QR code validation
- Power-off sensing
- Property access aid
- Interrupted gas supply sensing

Connect Portal

The Connect Portal

The Connect Portal is a single portal where your complete Ecosystem can be monitored, managed and maintained.

Connect is a highly secure cloud based data processing and machine learning hub at the heart of all Vericon Systems' solutions.

Ecosystem

BCM

An innovative near universal device that connects directly to a boiler's core control bus, providing two-way communication and control of many major functions.

AutoFill

Monitors and tops up central heating systems autonomously, helping to significantly reduce engineers' visits and helpdesk calls.

AutoDose

Inhibitor automatically tops up system water when low levels are detected.
