

## INSTALLATION & USER INSTRUCTIONS

# INTELLIGENT SOLAR MODULE ISM 1

FOR USE WITH THE FOLLOWING APPLIANCES AND ACCESSORIES:

CDI SYSTEM BOILER FITTED WITH OPTIONAL INTEGRAL DIVERTER VALVE  
FR110 PROGRAMMABLE ROOM THERMOSTAT  
FW100 WEATHER COMPENSATION CONTROLLER

**WORCESTER**  
**Bosch Group**

# 1 Symbols and safety precautions

## 1.1 Symbols

**Safety instructions** in this document are identified by a warning triangle and are printed on a grey background.

Signal words indicate the seriousness of the hazard in terms of the consequences of not following the safety instructions.

- **Caution** indicates that minor damage to property could result.
- **Warning** indicates that minor personal injury or serious material losses could result.
- **Danger** indicates that serious personal injury could result. In particularly serious cases, lives could be at risk.

**Notes** are identified by the symbol shown on the left. They are bordered by horizontal lines above and below the text.

Notes contain important information in cases where there is no risk of personal injury or material losses.

## 1.2 Safety precautions

- ▶ These instructions must be observed to ensure correct operation.
- ▶ Install and commission the boiler and all accessories in accordance with the associated instructions.
- ▶ Allow only qualified installers to install accessories.
- ▶ Use these accessories exclusively in conjunction with the controllers and boilers listed.  
Observe connection diagram.
- ▶ This accessory may require a different voltage. Never connect the low voltage side to the 230 V mains or vice-versa.
- ▶ Before installing these accessories:  
Isolate voltage supply (230 V AC) to the heating appliance and all additional devices using the bus.
- ▶ In case of wall mounting: Never install this accessory in damp areas.

## 2 Technical data for the accessory item

### 2.1 Intended use

This module ISM 1 is designed to control the components of a solar heating system that form part of a general heating system equipped with controllers FW 100 or FR 110.

### 2.2 Standard package

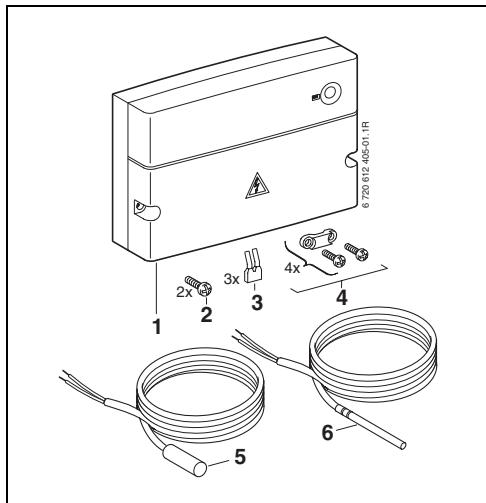

Fig. 1

- 1** ISM 1
- 2** Screws for securing the top section
- 3** Jumper in place of connecting a temperature limiter TB 1
- 4** Strain relief fittings
- 5** Cylinder temperature sensor (T2)
- 6** Collector temperature sensor (T1)

### 2.3 Technical data

<b>Standard delivery</b>	Fig. 1, page 4
<b>Dimensions</b>	Fig. 2, page 6
<b>Low voltage</b>	
- <b>BUS</b>	15 V DC
- <b>ISM</b>	230 V AC
- <b>controller</b>	10...24 V DC
- <b>pump</b>	230 V AC
<b>max. power consumption</b>	4 A
<b>Control output</b>	2-wire BUS
<b>max. output</b>	
- <b>per connection (R<sub>1</sub>- R<sub>3</sub>)</b>	120 W
<b>Measuring range, cylinder temperature sensor</b>	0 ... 99 °C
<b>Measuring range, collector temperature sensor</b>	-20 ... 140 °C
<b>permis. ambient temp.</b>	
- <b>ISM</b>	0 ... 50 °C
- <b>System temperature sensor</b>	0 ... 100 °C
- <b>Cylinder temperature sensor</b>	0 ... 100 °C
- <b>Collector temperature sensor</b>	-20 ... 140 °C
<b>Protection level</b>	IP44
	CE

30	16090	120	767
35	12800	130	591
40	10610	140	461
50	7166		

Tab. 3

## 3 Installation

### 3.1 Installation

**DANGER:** Risk of electric shock

- Prior to connecting the power supply, isolate the boiler and all other BUS subscribers from the power supply.

#### 3.1.1 Wall mounting

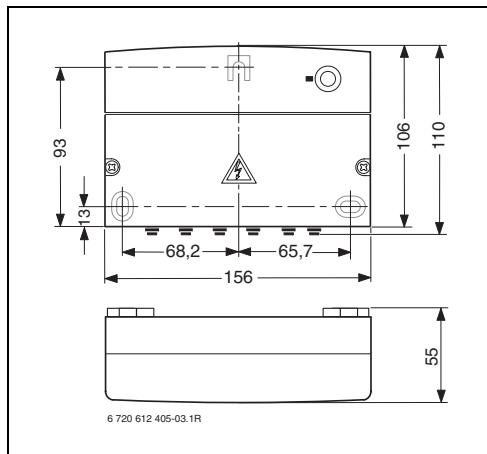

Fig. 2

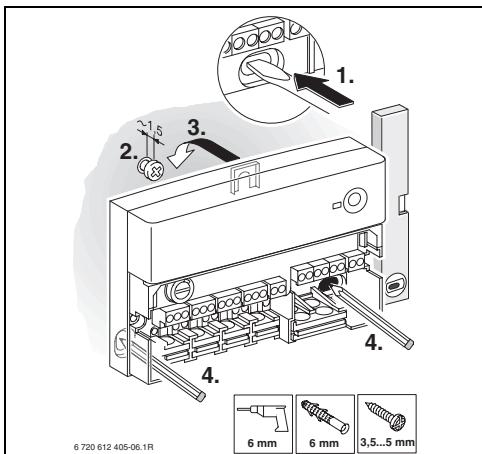

Fig. 4

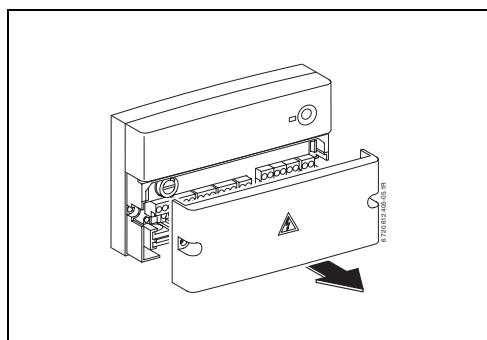

Fig. 3

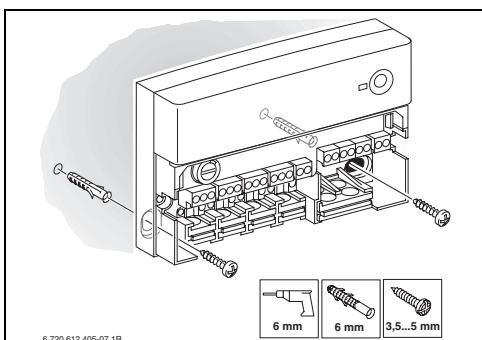

Fig. 5

### 3.1.2 Mounting on the mounting rail

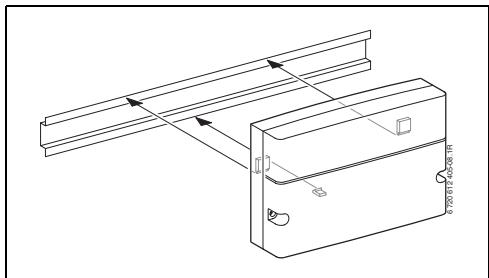

Fig. 6

### 3.1.3 Removal from the mounting rail

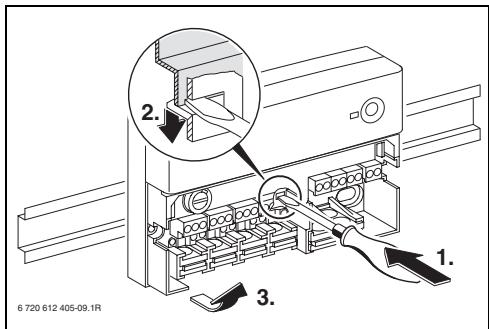

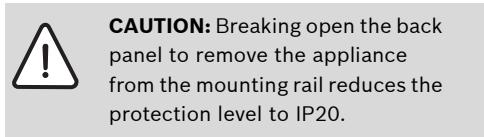

Fig. 7

## 3.2 Electrical connections

- ▶ Observe current wiring regulations, and use at least cable type H05 WV-... (NYM-I...) for the power connection.
- ▶ Always route cables/leads through the preassembled grommets and apply the strain relief supplied to protect the system against the ingress of dripping water.

### 3.2.1 Connection - low voltage section with BUS connection

Permissible cable length between the Heatronic 3 with BUS capability and the ISM....:

Cable length	Cross-section
≤ 80 m	0.40 mm <sup>2</sup>
≤ 100 m	0.50 mm <sup>2</sup>
≤ 150 m	0.75 mm <sup>2</sup>
≤ 200 m	1.00 mm <sup>2</sup>
≤ 300 m	1.50 mm <sup>2</sup>

Tab. 4

- ▶ To avoid inductive interference, lay all bus cables separately to lines of 230 V or 400 V (minimum spacing 100 mm).
- ▶ In case of external inductive interference, shield the cables. This ensures that the cables are shielded from external interference (e.g. heavy current cables, overhead wires, transformer stations, radio and television set, amateur radio stations, microwave ovens etc.).

- When sensor leads are extended, apply the following lead cross-sections:

Cable length	Cross-section
≤ 20 m	0.75 mm <sup>2</sup> ... 1.50 mm <sup>2</sup>
≤ 30 m	1.00 mm <sup>2</sup> ... 1.50 mm <sup>2</sup>
≥ 30 m	1.50 mm <sup>2</sup>

Tab. 5

To safeguard the splashproof rating (IP): Route cables so that the cable sheath protrudes at least 20 mm into the cable grommet (→ Fig. 8).

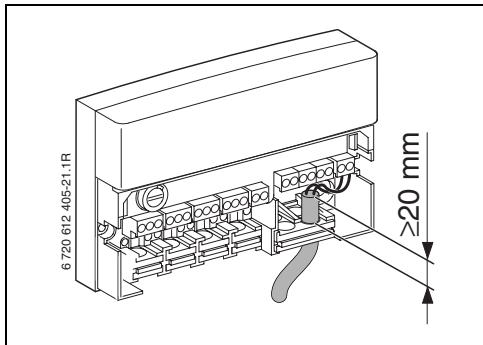

Fig. 8

### 3.2.2 230 V AC connection

- Only use electric cable of similar quality.
- Never connect additional control circuits that regulate other system components to the outputs.

Never exceed the maximum power consumption of the system components as specified (→ chapter 2.3 on page 4).

When connecting several electrical devices:

- Protect the electrical devices with a separate isolator that provides a minimum contact separation of 3 mm, if the maximum power consumption exceeds the specified value (e.g. fuse, isolator).

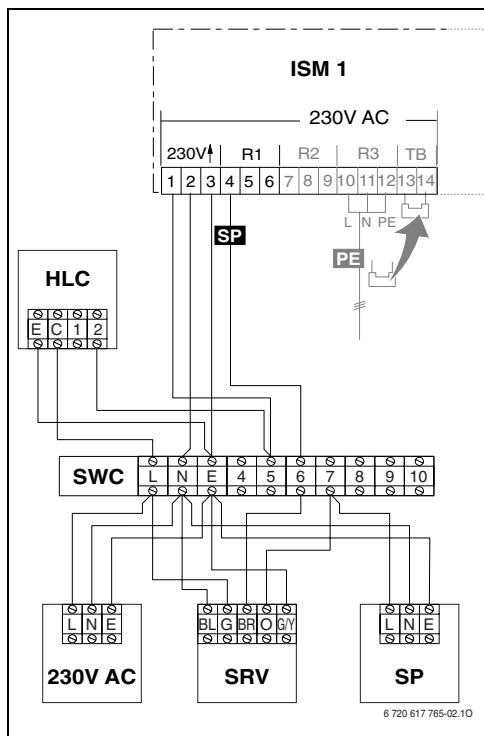

Fig. 9 Electrical connection of Solar Wiring Centre

<b>HLC</b>	High limit control
<b>ISM 1</b>	Module for standard solar heating systems
<b>PE</b>	Circulation pump for thermal disinfection (Option E)
<b>R1...3</b>	Connection for pump or diverter valve
<b>SP</b>	Solar circuit pump
<b>SRV</b>	Solar return two port valve
<b>SWC</b>	Solar wiring centre
<b>TB</b>	Temperature limiter

### 3.3 Installation of supplementary accessories to protect an unvented domestic hot water cylinder

► Install supplementary accessories in accordance with legal requirements and the installation instructions supplied.

- HLC
- SRV
- SWC

May be supplied by the unvented domestic hot water cylinder manufacturers, please refer to the installation instructions, otherwise are available at plumber's merchants.

### 3.4 Connection diagram

Module ISM 1 enables the creation of a standard solar heating system (system 1, solar DHW heating) with thermal disinfection option for the solar cylinder

Pump PE only for thermal disinfection.

Fig. 10 on page 10 shows the connections required for this at module ISM 1.

<b>HLC</b>	High limit control	<b>SRV</b>	Solar return two port valve
<b>HP</b>	Heating circuit pump	<b>SWC</b>	Solar wiring center
<b>ISM 1</b>	Module for standard solar heating systems	<b>System 1</b>	Solar cylinder for solar DHW heating
<b>KW</b>	Cold water connection	<b>T<sub>1</sub></b>	Collector temperature sensor
<b>NTC1...3</b>	Temperature sensor connection	<b>T<sub>2</sub></b>	Cylinder temperature sensor, bottom (solar cylinder)
<b>Option E</b>	Thermal disinfection of solar cylinder (optional hydraulical connection)	<b>TB</b>	Temperature limiter
<b>PE</b>	Circulation pump for thermal disinfection (Option E)	<b>TWM</b>	Thermostatic DHW mixer
<b>R1...3</b>	Connection for pump or diverter valve	<b>WW</b>	DHW connection
<b>RE</b>	Flow rate adjuster with indicator	<b>WS<sub>s</sub></b>	Solar DHW cylinder
<b>RV</b>	Non-return valve	<b>ZS</b>	System boiler with optional built-in diverter valve
<b>SB</b>	Gravity brake	<b>1)</b>	Electrical Connection (→ Fig. 9)
<b>SF</b>	Cylinder temperature sensor (boiler)	<b>2)</b>	Install as close to the cylinder hot water outlet as possible

## 4 Commissioning

**CAUTION:** A fault condition could arise if power is supplied to the BUS before all components are connected.

- ▶ Connect all BUS subscribers prior to supplying the BUS with power.

## 5 Fault mode

The operating display indicates the operating state of accessories.

Faults are indicated in the controller display or that of the respective remote control.

Operating display	ISM response	Fault/Remedy
constantly OFF	-	Switch ON power. Replace fuse (→Fig. 11).  HLC on unvented domestic hot water cylinders is open circuit. Reset and investigate cause of operation. If water is also seen discharging from any of the cylinder safety valves, a suitably qualified installer should be contacted immediately.
flashing	Controlled emergency mode: The ISM tries to respond to the fault with an alternative control strategy.	The system yield is largely maintained. Nevertheless, the fault should be remedied, not later than during the next service.
constantly ON	Standard mode	not a fault
